

Tether

Reliable AI Concierge — Live MVP

Persistent memory · Real tools · Human-in-the-loop approval

Project Summary

Tether is a live, deployed AI concierge that demonstrates the four core agentic patterns — persistent memory, real tool use, task orchestration, and human-in-the-loop approval — wrapped in the MAA v4.0 trust layer (Pillars 10-16). Unlike a throwaway demo, it is deployed and serving real requests on a public URL.

One-line summary: An AI concierge that remembers, uses tools, orchestrates steps, and stops to ask for human approval before it acts — live on the web.

Live Deployment

URL	https://ai-concierge-lake-three.vercel.app
Status	Live · HTTP 200 · serving API requests
Platform	Vercel (free tier) · Next.js 14 · Serverless API
Source	https://github.com/alvidrishti/ai-concierge (public)

Core Capabilities Demonstrated

1. Persistent memory

Name/preferences persist across sessions (Supabase Postgres).

2. Tool use

Reminders, local places lookup (Dhaka), web references.

3. Orchestration

A request is split into steps; each tracks in_progress / waiting_on_user / done.

4. Human-in-the-loop

Before creating anything the agent holds a PENDING action and waits for Approve/Reject — never guesses, never acts silently (MAA Pillar 10).

Live Verification (proof)

Tether — deployment verification (live)

```
$ curl https://ai-concierge-lake-three.vercel.app
HTTP 200 OK
title: Tether — Reliable AI Concierge
$ POST /api/chat "Hi"
assistant: Hi! I'm your concierge — I can set reminders, find & compare options, check
weather, and remember your preferences.
$ POST /api/chat "Remind me about my dentist appointment next Tuesday at 3pm"
intent: remind
pendingAction: Create reminder: "my dentist appointment" on next tuesday at 3pm
-> HELD for human approval (MAA Pillar 10)
$ POST /api/chat "Find 3 coffee shops near Dhanmondi and compare"
tool: places_lookup
assistant: Here are 3 options for "coffee shops" near Dhanmondi:
=== LIVE: https://ai-concierge-lake-three.vercel.app ===
```

Live deployment proof: HTTP 200, title, and real API responses for greeting, approval gate, and lookup.

Tools / Stack Used

Language/Framework: Next.js 14 (React, TypeScript)

Backend	Vercel Serverless functions (/api/chat, /api/approve)
Memory	Supabase Postgres (service-role REST) + in-memory fallback
Trust layer	Approval gate · self-QA · audit (MAA v4.0 Pillars 10-16)
Deployment	Vercel CLI / free tier — live public URL

Roadmap — WhatsApp + Billing (next)

WhatsApp	Integrate Twilio WhatsApp API so users chat via their messaging app; keeps the same agent + approval gate.
Billing	Stripe subscription (hosted checkout) — \$5-10/user/mo; or \$1,500-5,000 setup + monthly retainer on Upwork.
